No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Description

Scoring table:

The present invention describes an isolated and purified nucleic acid (I) catched the accodes a 200 kba outer membrane protein of Moraxella acturhalis.

The 200 kba outer membrane protein (II) has antibacterial activity and the 200 kba outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarhalis immunoassays for detecting specific antibodies (Ab), and to antigen in immunoassays for detecting specific antibodies (Ab), and to antigen in immunoassays for detecting specific antibodies (Ab), and to fragments are used as probes for identifying/cloning 200 kba protein fragments are used as probes for identifying/cloning 200 kba protein fragments are used as probes for identifying/cloning 200 kba protein (I) makes possible production of large amount of recombinant immunogens. (I) makes possible production of large amount of recombinant immunogens. (I) makes possible production of large amount of recombinant immunogens. Characts the Escherichia coll host. The present sequence represents the towards the Escherichia coll host. The present sequence represents the confirmation in the exemplification of the present invention. Fig 7; Claim

The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as infections, particularly otitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its caraments are used for recombinant production of (II) and its genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coll host. The present sequence represents the examplification of the present in the sequence of the protein or examplification of the present in the complete of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the procession of the process
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           29;

aerobic, gram-negative diplococcus, normally found among the bacterial flora of human upper airways. M. caterrhalis is known to cause acute, localised infections such as otitis media, sinusitis and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              comprising of a combination of 41 nucleic acid molecules (see ARZ8814-ARZ8854). The library has a number of uses described in the specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to a Moraxella catarrhalis genomic library
                                                                                                                                                                                                                                                                                                         otitis media; sinusitis;

The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kDa outer membrane protein of Moraxella catarrhalis. The 200 kDa outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kDa protein (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coll host. The present sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              catarrhalis outer membrane protein,

The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kba outer membrane protein of Moravella catarrhalis. The 200 kba outer membrane protein of Moravella catarrhalis. The 200 kba outer membrane protein of Moravella catarrhalis. The used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly outlis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kba protein genes from other strains, and for idagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coil host. The present sequence represents the moral strain 4223 genomic 200kba gene, which is given in the

The DNA was isolated from a strain 4223 genomic library in phage lambda EMBL3 by screening with an anti-200 kDa protein guinea pig antiserum. The gene can be used for the recombinant expression of the OMP (for use in vaccines), for the prepn. of hybridisation probes, or may be incorporated into a live vector for use in direct immunisation.

88888888888888888888**%**8

The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein of Moraxella catarrhalis. Can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kba protein genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. (I) makes possible production of (II) reduces toxicity of the protein towards the Escherichia coll host. The present sequence represents the towards the Escherichia coll host. The present sequence represents the contract of the protein co the exemplification of the present invention.

The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein (II) has antibocterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly olitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/Cloning 200 kba protein genes from other strains, and for idagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coli host. The present sequence represents the M. catarrhalis strain 4223 lambdabenals clone 200kpa coding sequence, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              28;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kba outer membrane protein of Moraxella catarrhalis. The 200 kba outer membrane protein (II) has antibacterial activity and can be used in vaccines. [II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, particularly otitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kba protein genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens. Expression of truncated versions of (II) reduces toxicity of the protein towards the Escherichia coll host. The present sequence represents the m. catarrhalis M56 200kba gene in pKS348, which is given in the exemplification of the present invention.

```
The present sequence represents a Haemophilus influenzae adhesin (Hia) gene from the non-typeable Haemophilus influenzae (NTHI) strain M407. Hia genes and proteins have antiinflammatory, auditory and antibacterial activities, and can be used in the production of a vaccine. An immunogenic composition comprising an Hia gene, a polypeptide encoded by an Hia gene, or a recombinant Hia polypeptide is useful for inducing protection against disease caused by Haemophilus strains in a susceptible host, preferably a human. An Hia protein is useful as an
                                                                                                                                                                                                                                                                                                                                                                              Hia; adhesin; Haemophilus influenzae adhesin; NTH1; infection; vaccine; non-typeable Haemophilus influenzae; antiinflammatory; auditory; antibacterial; meningitis; epiglottitis; septicaemia; otitis media; diagnosis; immunogenic; antigen; ds.

antigen, in immunogenic preparations including vaccines, as a carrier for other immunogens, and in the generation of diagnostic reagents. His is useful for treating diseases caused by the infection of Haemophilus influenzae such as meningitis, epiglotitis, septicaemia and otitis media. Recombinant production of Hia favours high recovery of the protein compared to the low recovery of native protein from Haemophilus influenzae species. A truncated protein has a significantly higher amount of recovery than a full-length protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hia; adhesin; Haemophilus influenzae adhesin; NTHi; infection; vaccine; non-typeable Haemophilus influenzae; antlinflammatory; auditory; antlibacterial; meningitis; epiglottitis; septicaemia; otitis media; diagnosis; immunogenic; antligen; ds.

The present sequence represents a Haemophilus influenzae adhesin (Hia) gene from the non-typeable Haemophilus influenzae (NTHi) strain 33.

Hia genes and proteins have antiinflammatory, auditory and antibacterial activities, and can be used in the production of a vaccine. An immunogenic composition comprising an Hia gene, a polypeptide encoded by an Hia gene, or a recombinant Hia polypeptide is useful for inducing protection against disease caused by Haemophilus strains in a susceptible host, preferably a human. An Hia protein is useful as an antigen, in immunogenic preparations including vaccines, as a carrier for other immunogens, and in the generation of diagnostic reagents. His is useful for treating diseases caused by the infection of Haemophilus is a useful for treating diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                influenzae such as meningitis, epiglottitis, septicaemia and otitis media. Recombinant production of Hia favours high recovery of the protein compared to the low recovery of native protein from Haemophilus influenzae species. A truncated protein has a significantly higher

gene from the non-typeable Haemophilus influenzae (NTH1) strain K9.

Hia genes and proteins have antiinflammatory, auditory and antibacterial
activities, and can be used in the production of a vaccine. An
activities, and can be used in the production of a vaccine. An
interpolation composition compliance in a polypeptide is useful for inducing
by an Hia gene, or a recombinant Hia polypeptide is useful for inducing
by an Hia gene, or a recombinant Hia polypeptide is useful for inducing
protection against disease caused by Haemophilus strains in a
susceptible host, preferably a human. An Hia protein is useful as an
antigen, in immunogens, and in the generation of diagnostic reagents. His
for other immunogens, and in the generation of diagnostic reagents. His
is useful for treating diseases caused by the infection of Haemophilus
influenzae such as meningitis, epiglotitis, septicaemia and otitis
media. Recombinant production of Hia favours high recovery of the
protein compared to the low recovery of native protein from Haemophilus
influenzae species. A truncated protein has a significantly higher
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ä

```

```
The present sequence represents a Haemophilus influenzae adhesin (Hia) gene from the non-typeable Haemophilus influenzae (NTHI) strain K22.
Hia genes and proteins have antilnflammatory, auditory and antibacterial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hia; adhesin; Haemophilus influenzae adhesin; NTH1; infection; vaccine; non-typeable Haemophilus influenzae; antiinflammatory; auditory; antibacterial; meningitis; epiglottitis; septicaemia; otitis media; diagnosis; immunogenic; antigen; ds.

                immunogenic composition comprising an Hia gene, a polypeptide encoded by an Hia gene, or a recombinant Hia polypeptide is useful for inducing protection against disease caused by Haemophilus strains in a susceptible host, preferably a human. An Hia protein is useful as an antigen, in immunogenic preparations including vaccines, as a carrier for other immunogens, and in the generation of diagnostic reagents. His is useful for treating disease caused by the infection of Haemophilus influenzae such as meningitis, epiglottitis, septicaemia and otitis media. Recombinant production of Hia favours high recovery of the protein compared to the low recovery of native protein from Haemophilus influenzae species. A truncated protein has a significantly higher amount of recovery than a full-length protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ggcaaacgtgcagatgcaggtacagcaagtgcattagcagcttcacagttacc----a 3142

Moraxella catarrhalis.

```
The present invention describes an isolated and purified nucleic acid (I) that encodes a 200 kDa outer membrane protein of Moraxella catarrhalis. The 200 kDa outer membrane protein (II) has antibacterial activity and can be used in vaccines. (II), and its truncated versions, are used as immunogenic compositions and vaccines to protect against M. catarrhalis infections, parktuolarly ofitis media in humans. (II) is also used as antigen in immunoassays for detecting specific antibodies (Ab), and to generate Ab. (I) are used for recombinant production of (II) and its fragments are used as probes for identifying/cloning 200 kDa protein genes from other strains, and for diagnostic detection of M. catarrhalis. (I) makes possible production of large amount of recombinant immunogens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               towards the Escherichia coll host. The present sequence represents a
M. catarrhalis strain 4223 200kDa partial nucleotide sequence, which is
                                                                                                                                                                                                                                                                             New nucleic acid encoding Moraxella catarrhalis outer membrane protein, useful in protective vaccines and for diagnosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gagtgcgccaaatcccacagcggaggagtagcagtagtaccgcaggacaggtgggcagc 120

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

JOURNAL Unpublished (1999) COMMENT Other_GSSs: Sheared DNA-46J23.TF Contact: Najib M. El.Sayed Department of Eukaryotic Genomics	The Institute for Genomic Research 9712 Medical Center Dr., Rockville, MD 20850, USA Tel: 301 838 0200 Fax: 301 838 0200 Email: nelsayed@tigr.org Email: nelsayed@tigr.org Clones are derived from the Trypanosoma brucei GUTat 10.1 sheared DNA library constructed at TIGR. Clones will be available for distribution through ATCC. Sheared DNA end sequences search page: http://www.tigr.org/tdb/mdb/tbdb/.	<del></del>	Genomic DNA isolated from a cloned population of Trypanosoma brucei (TREU927/4 GUTat 10.1) was mechanically sheared tog qive a tight size distribution (approx 2 kb). The v + i method used for the library construction is described in detail in Smith, H.O. and Venter, J.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barell, Oxford University press, 1999)."	Query Match  Query Match  Best Local Similarity  44.88; Pred. Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila malanogaster genome using these BACs. For further information please see http://www.fruitily.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Piteter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo.

NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and bx to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be location/Qualifiers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Direct Submission
Submitted (12-APR-2000) to the EMBL/GenBank/DDBJ databases
This sequence is a single read and was generated as part of a large
scale clone-end sequencing project of the Tetraodon nigroviridis
genome. For more information, please take a look at

Determination of this BAC-end sequence was carried out as part of collaboration with the Barkeley Drosophila Genome Project (BDGP).
The BDCP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information
